Media Article

- Fox news biased charts
- News source : FOX NEWS
- Article author : Flowing DATA
- [Fox News still makes awesome charts | FlowingData]

Things they get right

- The one good thing about this chart is that at least they have provided the data point values(eg 9.0,8.9,8.8) .
- They used a graph format which is easy to understand for the general public.
- They have mentioned the source of the data they retrieved it from, which if someone wants to check and refer it.
- They have marked the values on X and Y axis.
- A discrete title has been given to the graph.

Things they get wrong

- The first thing to be noted is that the graph on the y-axis starts from 8% directly rather than showing how the data looks like if started from 0 which makes a dramatic increase in the highs and lows of the graph.
- When the analysis of the graph is done more precisely it can be seen that a dip in the graph where 8.8 is, has been shown more than 8.6 which is a false representation of the data and graph which is also not ethical.
- The colours they have used for the graphs are intense primaries that tire the eyes and might make general public not notice the small errors in the graph.
- Whistle the intense primaries have been used the Blue and Red used together refract differently and it makes it difficult to focus on both at the same time.
- The title of the graph sounds biased as there could be other reasons for the slight drop in the employment rates.
