Media Article

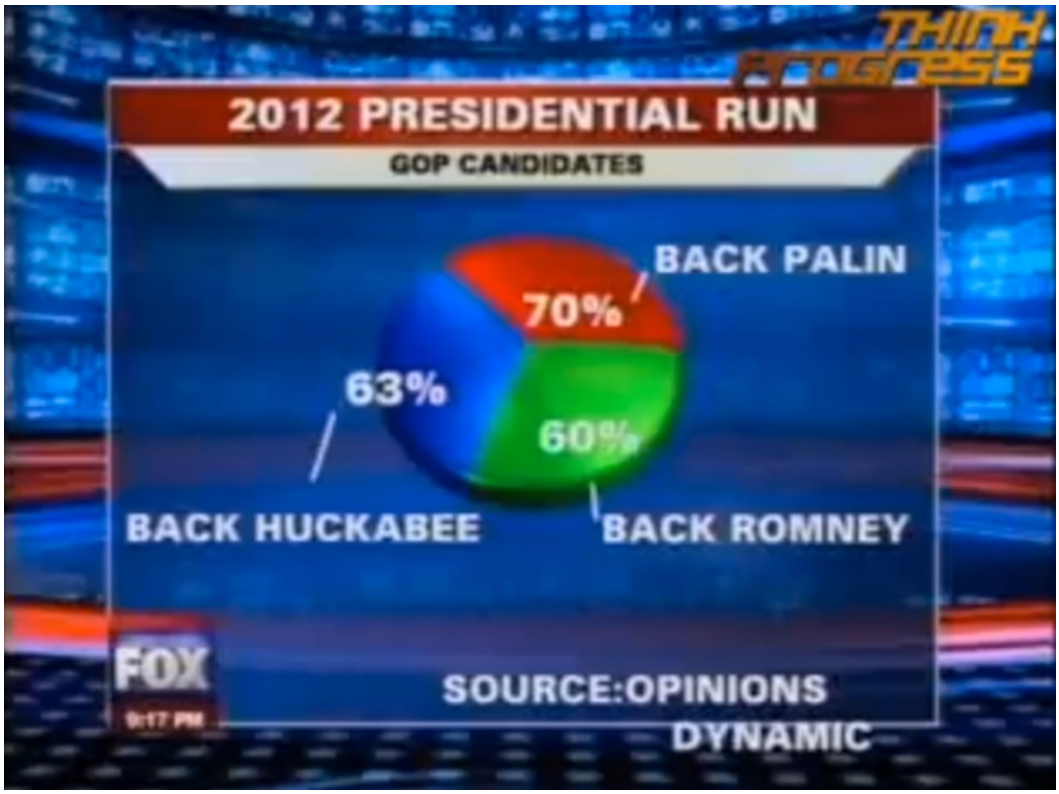

Article title: Fox News Makes the Best Pie Chart. Ever

Newspaper, news source: Fox News|Flowing data

Article author : Flowingdata

[Fox News Makes the Best Pie Chart. Ever. | FlowingData]

Things they get right

- The pie chart has been annotated which helps understand which part of the pie chart is of which candidate.
- The percentage have been specified as well.
- They have provided a source of where they got the information for the chart
- The Heading or title of the chart is stated properly

Things they get wrong

- When seeing the chart the first thing which comes in notice is the colors used in the pie chart. As taught in week 5 graphics & probability the colors RGB are to be avoided to be used together atleast in account of the color blind people.
- The background and all the colors used together make this whole chart seem very chaotic and general public wont be able to focus properly as the colors will refract.
- The chart made in 3D which makes the green part which is the smallest at 60% look bigger than blue which is the largest at 70%.This might confuse the general public.
- The most concering thing used in the pie chart are the sizes of the bin, which when calculated 63+60+70 totals upto 193% which shows the graph is wrong as the total should be 100%
- The source of the calculation of the pie chart says “Opinion” of people which might be biased and no one knows how many people were asked for there opinion.
  Could 10,000 , could be 1000 or could be 3 no one knows. So this makes the source irrelevant.
